SUMMARY

Results-focused Data Analyst with UK industry and research experience delivering measurable improvements across operations, analytics, and decision-making. Strong track record of turning raw data into actionable insight using SQL, Power BI, Python, and automation. Delivered improvements in forecasting accuracy, reporting speed, stock control, and process efficiency across retail, academia, and business environments. Combines technical capability with commercial awareness and stakeholder communication.

SKILLS

SQL, Power BI, Excel, Tableau, KPI Reporting, Dashboarding, Data Visualisation, Python, Pandas, NumPy, scikit-learn, TensorFlow, Power Query, Stakeholder Management, Forecasting, Reporting, Process Improvement, ETL, Data Cleaning, Data Modelling, Data Quality, Automation, Requirements Gathering, Root Cause Analysis, Microsoft Dynamics 365, Communication, CI/CD.

EDUCATION

Northumbria University - Newcastle, UK

MSc Data Science with Distinction (09/2024 – 09/2025)

WORK EXPERIENCE

Drevoix - Remote

Systems Analyst (Jul 2025 – Present)

- Analyzed app event data (cohorts, funnels, retention) to identify engagement drivers; informed product changes that increased daily active users by 20%.
- Created self-service Power BI dashboards with consistent KPI definitions and drill-through views, reducing ad-hoc reporting by 40%.

Fenwick - Newcastle, UK

Warehouse Operations Assistant (11/2024 – Present)

- Improved inventory accuracy by 15% using Microsoft Dynamics 365 and structured stock controls.
- Reduced recurring discrepancies by 20% through better tracking of shortages, damages, and transfers.
- Strengthened quality performance by identifying recurring defects and supporting corrective actions.
- Improved picking and replenishment efficiency by reorganizing stock locations using movement trends.
- Supported fast-paced operations while maintaining service and compliance standards.

Northumbria University - Newcastle, UK

Research Assistant (11/2024 – 03/2025)

- Built LSTM forecasting models that improved baseline prediction accuracy by 35%.
- Automated model tuning workflows, reducing manual experimentation time by 20%.
- Developed dashboards that improved stakeholder decision-making speed by 25%.
- Processed complex datasets using Python pipelines, improving data reliability.
- Presented technical findings clearly to academic and non-technical stakeholders.

CERTIFICATIONS

- Google Data Analytics (08/2025)
- Microsoft Cyber Security Analyst (07/2025)
- Managing the Company of the Future (09/2023)
- Data Science Companion (08/2023)
